Specific Fixes and Corrections	6

Introduction

Limecraft’s sixth release of 2026 (2026.6) is scheduled to be available on September 8th, and introduces the following set of new and extended functions and improvements.

New and Extended Features

Workspace-level notification controls

Notifications can now be enabled or disabled per workspace instead of all-or-nothing.

A new section at the bottom of notification settings lets users choose an opt-in or opt-out base model, then build a list of enabled or muted workspaces.

Workspace Notifications

For which workspaces do you want to receive notifications?

☐ Only workspaces I explicitly enable notifications for

☒ All workspaces I can access (via role or team)

Save

The notifications in these workspaces are muted

Click Add Workspace below to disable notifications for a workspace. Use the row actions to remove a workspace from this list.

+ Add workspace

Title	Created at	Last activity
My Workspace	Mon, 21 Oct 2024 07:1...	Wed, 25 Mar 2026 13:1...

Workspace Notifications

My Workspace	Thu, 23 Jul 2026 11:49:1...	Fri, 31 Jul 2026 12:49:5...

New users default to opt-in with an empty list. For existing users, also the opt-in model is activated with the list of opted-in workspaces prepopulated with all those the user currently has access to.

The current workspace can also be muted or re-enabled directly from the Flow breadcrumb dropdown:

Entering a workspace with notifications disabled surfaces an in-context alert, dismissible permanently or actionable on the spot:

Notifications are disabled for this workspace. [Enable notifications?](#)

[Enable](#) [Dismiss](#)

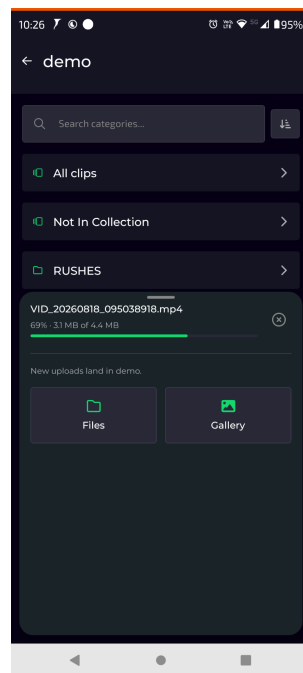

Enhanced Functionality

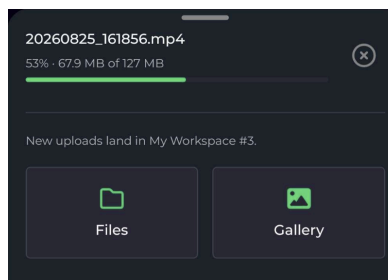

Mobile App: Media Uploads

The Limecraft mobile app (iOS & Android) now supports uploading media directly into a workspace — either picked from within the app or shared from another app.

Photos, videos, audio, and documents can all be selected via the native pickers.

(Large) uploads run in the background and progress shows both in-app and as a persistent notification with cancel control.

Additional Enhancements

Limecraft Flow

- (NL-8323) The new AAF export option is now also available in the Review and Logger screens.
- (NL-8312) The multicam player feature is now also available in Review and Subclip screens
- (NL-8296) Account administrators can now verify which of their users have Single-Sign-On (SSO) enabled

Email	Username	Full Name	Teams	Productions	Last seen	SSO enabled
batman@gotham.com	Batman	Batman	Team: Account Admin	all workspaces ...	25 min ago	
bruce.wayne@dccomics.com	BWayne	Bruce Wayne	Team: Account Create Production	1 workspace	30 min ago	✓

Limecraft Edge

- (FSC-2334) Duration detection on spanned legacy MXF clips has now been improved.
- (FSC-2290) Upon startup, Limecraft Edge now explicitly releases locks on the use of Avid SDKs in order to avoid sporadic transcode hangs when converting to MXF OP-atom output.

Specific Fixes and Corrections

Limecraft Flow

- (NL-8334) The multicam player now more appropriately handles its loading state when seeking while paused.
- (NL-8328) Review comments containing tags are now indexed more appropriately to support search functionality.
- (NL-8316) The issue preventing invite emails to be sent to previously unregistered users, has been resolved.
- (NL-8315) The multicam player now more consistently maintains synchronisation across all frames.
- (NL-8299) When multiple video tracks exist within a media file, the probing functionality will now more consistently handle such cases.
- (NL-8290) The ordering of categories in the Library View is now handled more consistently.

Limecraft Edge

- (FSC-2335) Timecode detection in imported AAFs describing OP-atom media delivered by external transcoding tools (incl. Telestream Vantage and EVS XT-access) has been improved. Multiple source packages are now more properly inspected for the presence of a possible valid Timecode.
