# 2023.1 | Release Notes

What's new

Protect share link with password

We are excited to announce the release of a much requested feature: the addition of password protection to our share links feature. With this update, users now have the ability to set a password for their shared links, ensuring that only authorised individuals can access the shared content.

Here's how it works:

- When creating a share link, select the "Set a password" option and enter the desired password (see screenshot below).
- Share the password - via chat, email or other - with anyone who needs access to the shared clips
- The password will be required before someone can access the shared content (see screenshot below).

This update will help you keep your shared clips secure and protected, giving you peace of mind that your content is only being seen by the people you intend to share it with.
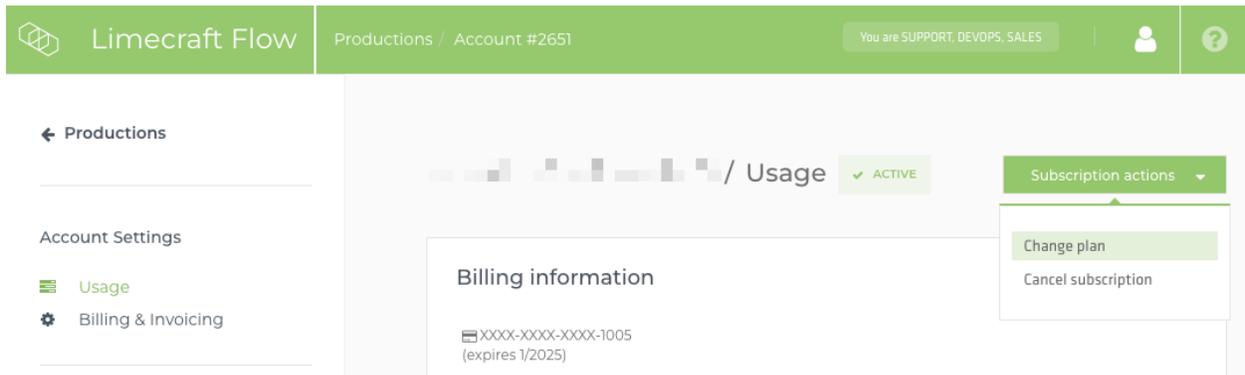

Allow Change Plan

Following up on our first boarding release of 8 November, we are adding the ability for our users to change their subscription plan at any time. This new feature allows you to easily upgrade your plan based on your evolving needs, giving you the flexibility to choose the best plan for you.

Here's how it works:

- Log into your account and navigate to the account settings page.
- Under the usage section, select "Change plan" option under the Subscriptions actions dropdown and select the plan you would like to switch to.
- Confirm the change and enjoy your updated plan.

This update will give you more control over your subscription, allowing you to select the best plan for your needs at any time.
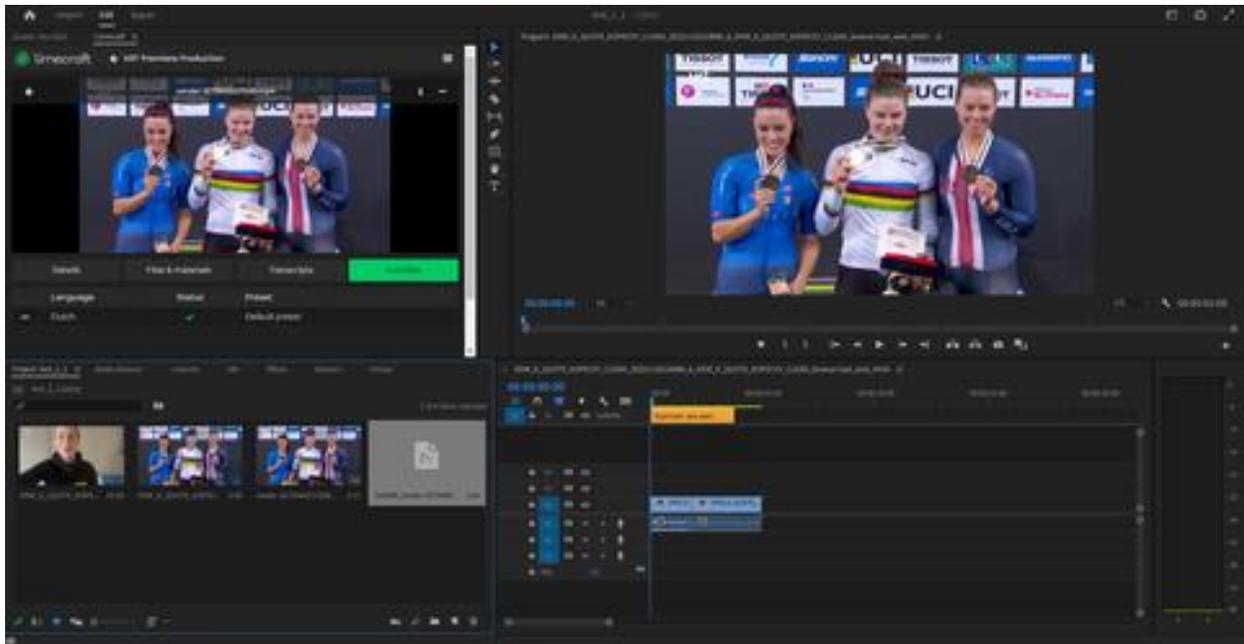

Adobe Panel

We are releasing a beta version of a new Adobe Premiere panel that integrates Limecraft's transcription, translation, and subtitling features. This new panel allows video editors to access Limecraft's powerful tools directly from within Adobe Premiere, streamlining the workflow and saving time.

Here's what you can expect with this integration:

- Upload your media or rendered timeline directly from Adobe Panel to Limecraft.
- Access to Limecraft's advanced transcription, translation, and subtitling capabilities.
- The ability to quickly search for and select transcriptions, translations, and subtitles directly from the Adobe Premiere panel.
- The ability to import generated subtitles directly from the Adobe Premiere panel to your timeline.

This integration is designed to make video editing workflows more efficient, saving you time and reducing the need to switch between multiple applications. With this integration, video editors can now access Limecraft's advanced tools directly from within Adobe Premiere, enhancing their overall experience.

We believe that this integration will greatly benefit video editors who rely on Adobe Premiere and will start boarding customers into our beta program soon.

Improvements

- Improve parsing EDL's with transformations
- Smarter upload chunking: the chunk size has been made dynamically based on the current upload speed
- Added new API calls for controlling password links
- Re-activated support for language locales on the Limecraft transcription engine
  - British English
  - US English
  - Australian English
  - Simplified Mandarin
  - Traditional Mandarin
- Limecraft Flow's transcoding has received updated components for better robustness in dealing with audiovisual inputs with inconsistent audio and video packet timings.

Bug fixes

- Browsing set of clips on files&material tab keeps loading
- Wrong number of tracks in Adobe Premiere
- Very slow transfer speeds to Azure
- workflow overview: show dialog fails
- Ingest slots are set to empty
- Watchfolder keeps trying to watch files that are gone.
- Windows volume name with illegal characters
