Introduction

Limecraft’s second release of 2025 (2025.2) is scheduled to be available on March 25th, and introduces the following set of new and extended functions and improvements.

New and Extended Features

Transcript Summarisation

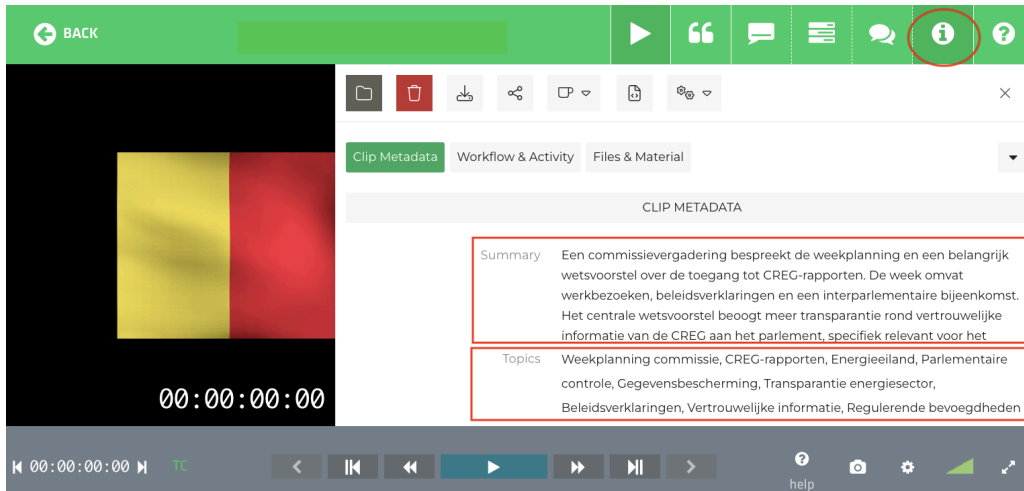

Upon specific request, though at no additional charge, Limecraft now offers the ability to generate a summary for a transcript. In addition to summarisation, this function also includes the capability to provide topics and chapters.

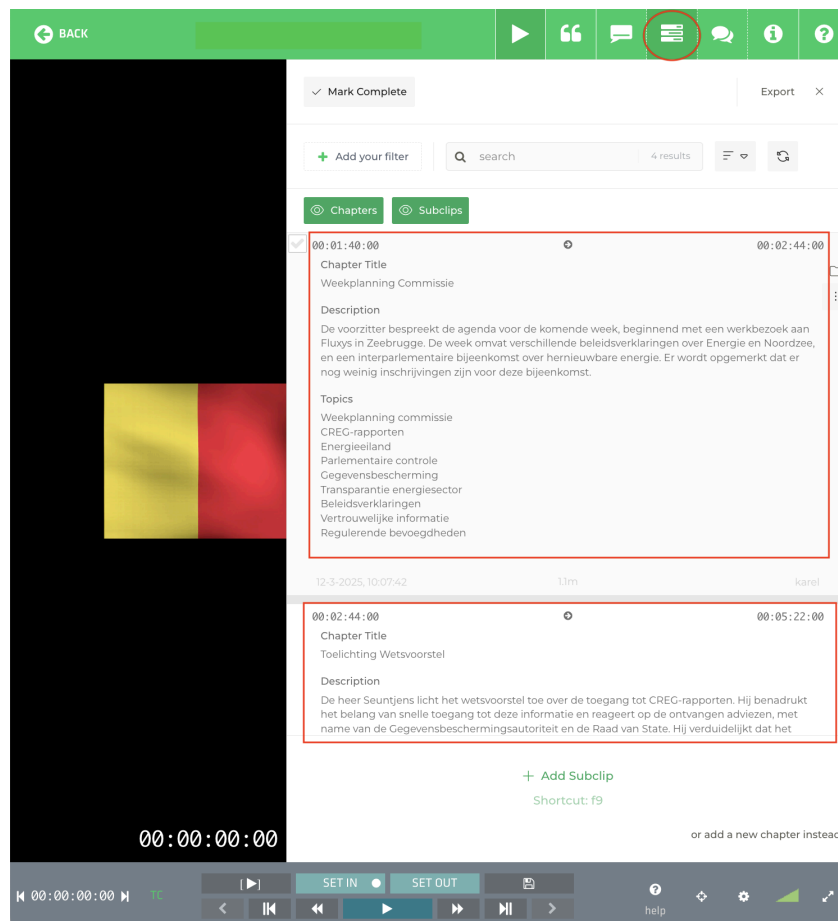

When starting a summarisation, several configuration options are available:

- Language - where you choose the target language for the summary / topics / chapters should be in.
- Generate Summary & Topics - where you define the amount and detail level intended for topics and summary
- Generate Chapters - where you define if and how many chapters should be generated.

The summary and topic results will subsequently be available as part of the clip metadata (fields 'Summary' and 'Topics').

The chapter results will show in the Subclip application.

Delivery Workspaces - Assignee and Reviewer

In Delivery Workspaces it is now possible to assign a request to a particular user or role (that is expected to fulfill the request). Similarly, it is also possible to set the reviewer of a request to a particular user or role (that is supposed to perform the review)

001. Episode 1 / Audio / Promo

Activity **Request Info** Versions →

Please provide the episode Audio Promo files

Choose file to upload to Limecraft Flow

Please check the audio tracks which are included in your file.

- Role - Production Administrator
- Role - Supplier
- Role - Producer

Archive Lock no changes so far save now Close Submit for review

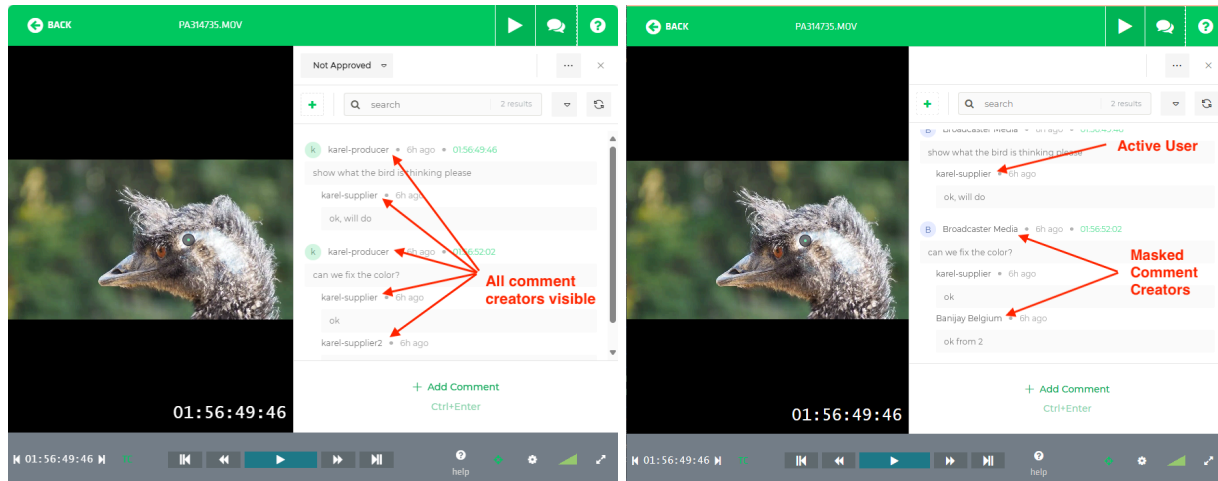

When requests are assigned, the request overview will show this accordingly.

Both Assignee and Reviewer can be used when searching and filtering requests.

Anonymisation of Review Comments

With this release, the option is made available to mask the creator for comments through the setup of new user roles without the 'View Comment Creator' permission.

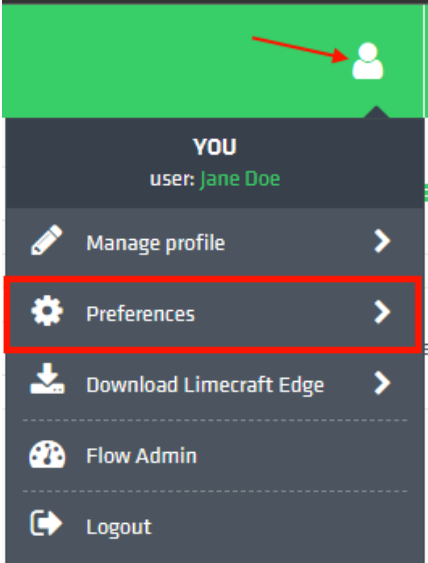

As a result, users without this permission will not see which user created a comment, instead the role name or role label for the user that created that comment will be displayed for such users.

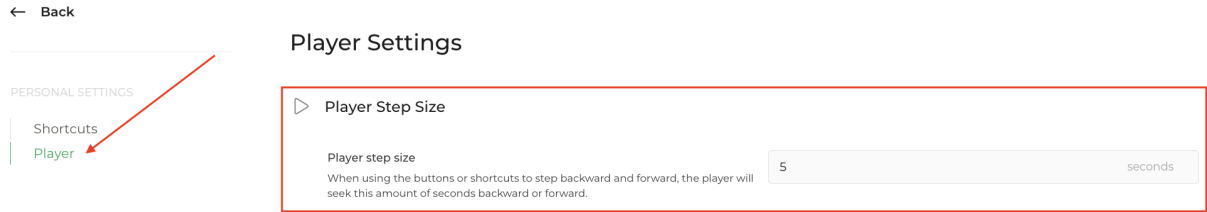

Note that all default configured user roles include the 'View Comment Creator' permission.

User Preference Configuration

It is now possible to configure specific user preferences from the User Profile section :

More specifically, as an initial configuration option it is now possible to adjust the granularity in which the player can be stepped forward/ backward:

Configurable shortcuts

From the new User Preferences configuration screen, a section is available to view, add, adjust or reset an elaborate set of shortcuts used throughout the application.

Navigate down (vertical) Navigate to the next comment, subclip or subtitle.	Down
Move to the next field When editing a field in Clip Info	Tab
Merge with next subtitle	Ctrl Down

Enhanced Functionality

Support for Canon Cinema RAW

With this release, Limecraft Edge now supports Canon Cinema RAW.

Additional Enhancements

- The Delivery Workspace now supports client-specific fields on delivery requests
- The Review application for Delivery Workspaces now also includes sharing and download functions.
- (NL-7223) Users with Single-Sign On (SSO) active will now require to relogin after 24h of inactivity

Specific Fixes and Corrections

- (NL-6842) The invalid replacement of “a...” with “1” in subtitles is now corrected.
- (NL-7106) STL export will now properly handle the pound symbol (£)
- (NL-7236) translation processing has been tuned to avoid the unintentional addition of punctuation characters
- (FSC-2202) AVC Intra Ultra HD no longer fails on rewrap and instead properly falls back to a configured transcode profile.
- (FSC-2193) Metadata labels of audio channels for the output of OP-atom transcodes are now properly handled.
- Logging into the Mobile App for a user account that is enabled for SSO no longer fails on an android device
